

WAYMARK Region Report

H3 region 87446ca85ffffff (resolution 7)

Generated 2026-10-08 19:03:51 UTC · Region h3_parent: 87446ca85ffffff · 42 cells

Region risk index 61.8 / 100	Scored cells 42	Past crashes 1,252	Emerging-risk cells 1
--	---------------------------	------------------------------	---------------------------------

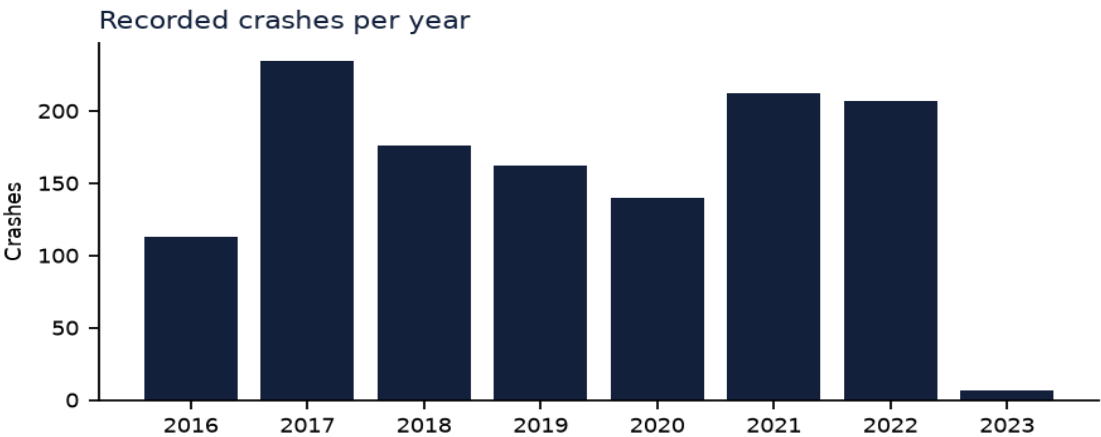

Mean risk score of the cells in the region (the same aggregation the map uses for grouped hexagons).

Night-time crashes: 24% · Severity 3 or higher: 16%

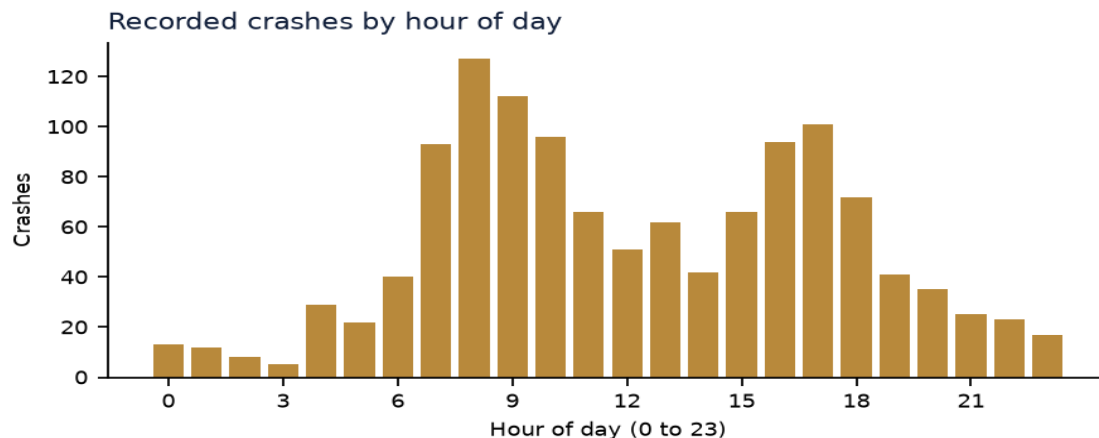

Top hotspot cells

#	Cell	Score	Past crashes	Confidence	Locality
1	89446ca8597ffff	100.0	157	High	Main St
2	89446ca8583ffff	99.8	119	High	I-610 E
3	89446ca8563ffff	98.0	89	High	Main St
4	89446ca85cbffff	97.3	159	High	I-610 E
5	89446ca8587ffff	96.8	100	High	Main St
6	89446ca85c3ffff	88.4	19	High	I-610 W
7	89446ca858ffff	88.3	20	High	Main St
8	89446ca850ffff	88.2	26	High	Main St
9	89446ca856bffff	88.1	17	Medium	Old Spanish Trl
10	89446ca8503ffff	87.0	38	High	Main St

Priority issues

Crash history is concentrated in a few cells

The 10 highest-scoring cells hold 744 of the region's 1,038 past crashes (72%) while being 24% of its cells.

Cells: 89446ca8597ffff, 89446ca8583ffff, 89446ca8563ffff, 89446ca85cbffff, 89446ca8587ffff and 5 more

Emerging-risk cells with little crash history

1 of 42 cells are flagged as emerging risk: they score high for cells with similar history, and have 1 to 1 past crashes each.

Cells: 89446ca85cffff

Caveats

- Risk scores are model estimates built from historical crash records. They are not predictions of future crashes.
- The region index is the mean of the cells' risk scores; it describes the region as a whole, not any one road.
- Data-quality WARN: 2017 jump (2017 has 30,297 Houston crashes versus 15,566 in 2016 (1.9x). Treat pre-2017 data as not comparable.)
- Data-quality WARN: 2023 partial year (Data for 2023 ends on 2023-03-31 (about 3 of 12 months). 2023 is incomplete and is excluded from yearly comparisons and from model training and testing.)
- Data-quality WARN: Nulls: Precipitation(in) (Houston: 42.94% missing (72,746 of 169,428 rows); all US rows: 28.51%. Thresholds: WARN > 1.00%, FAIL > 10.00%. Fallback: the pipeline also detects rain from Weather_Condition text and treats missing precipitation as 0.)
- Data-quality WARN: Nulls: Temperature(F) (Houston: 1.35% missing (2,293 of 169,428 rows); all US rows: 2.12%. Thresholds: WARN > 1.00%, FAIL > 10.00%. Fallback: loaded but not used as a model feature.)

These are estimates from historical crash records, not predictions. The adjusted index is an overlay estimate, not a re-run of the risk model.

Placeholder weights: the effect weights used for the adjusted risk estimate are placeholders until a domain owner replaces them in backend/config/effects.json.
